

a/  
23

after female ( $3^{\text{min}}$ ) surrogate.

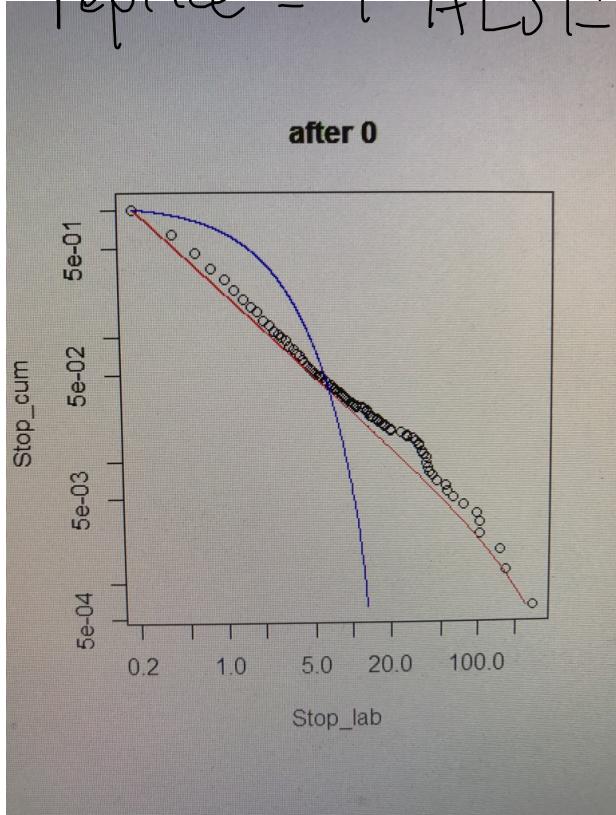

move/pause data & randomize L2.

exponential &  $\tau = 4$  fit it

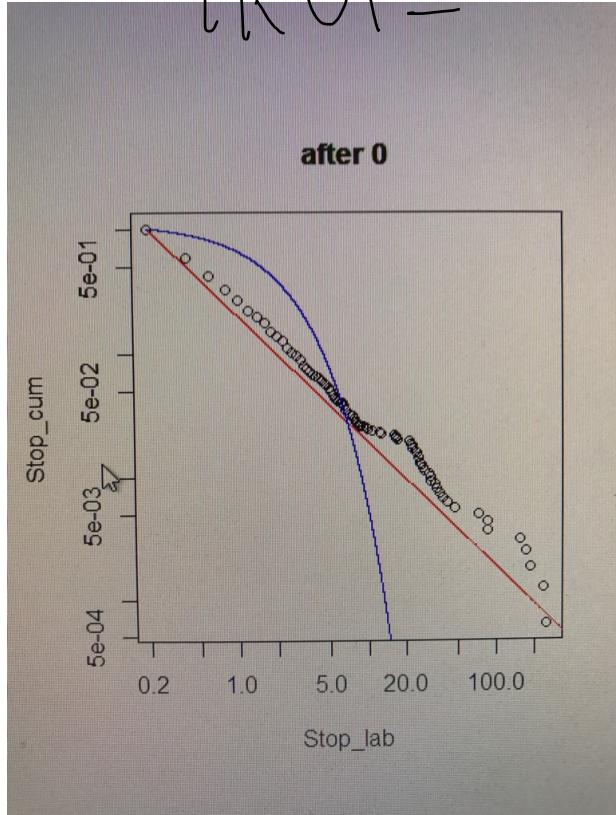

RS

① 各個体レベルでランダム化後、 $\tau = 100$  fitting.

replace = FALSE

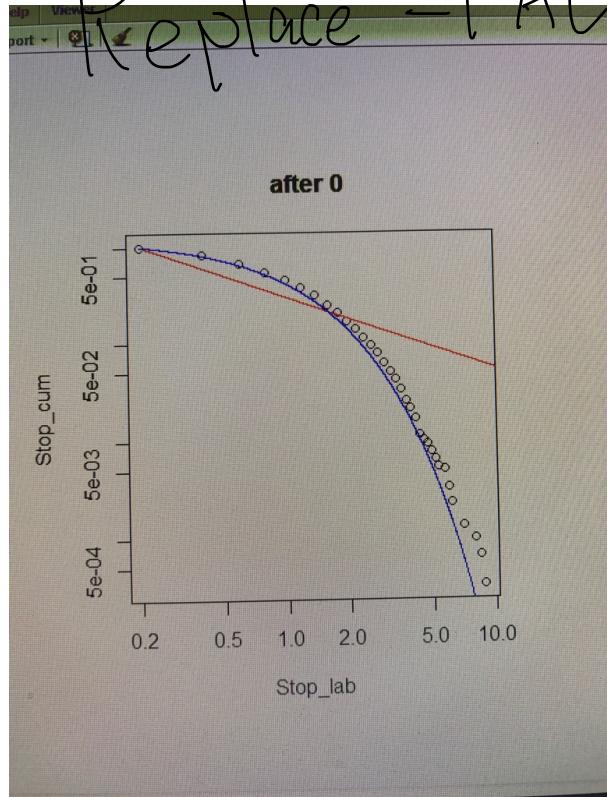

TRUE

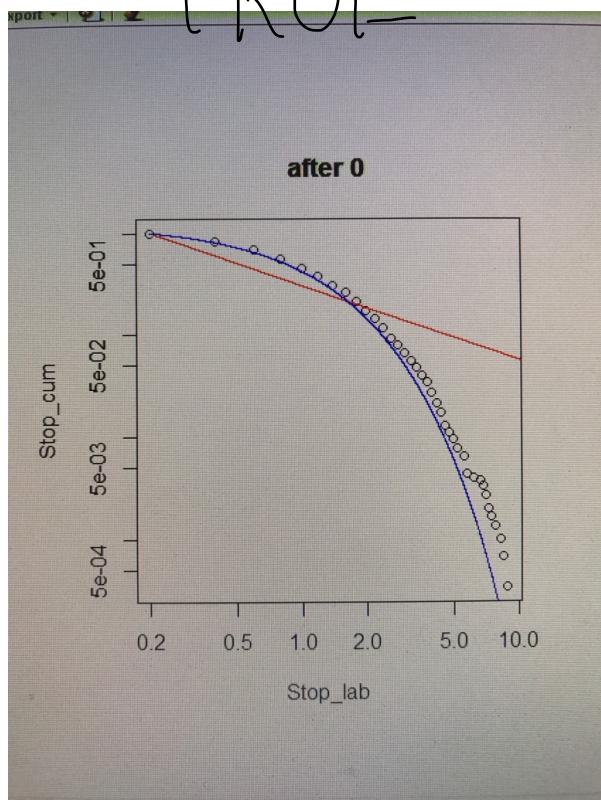

$$\mu = 1.982496$$

② 全個体の pause/move data を parallelize.  
 Randomize → fitting

Replace = FALSE

TRUE

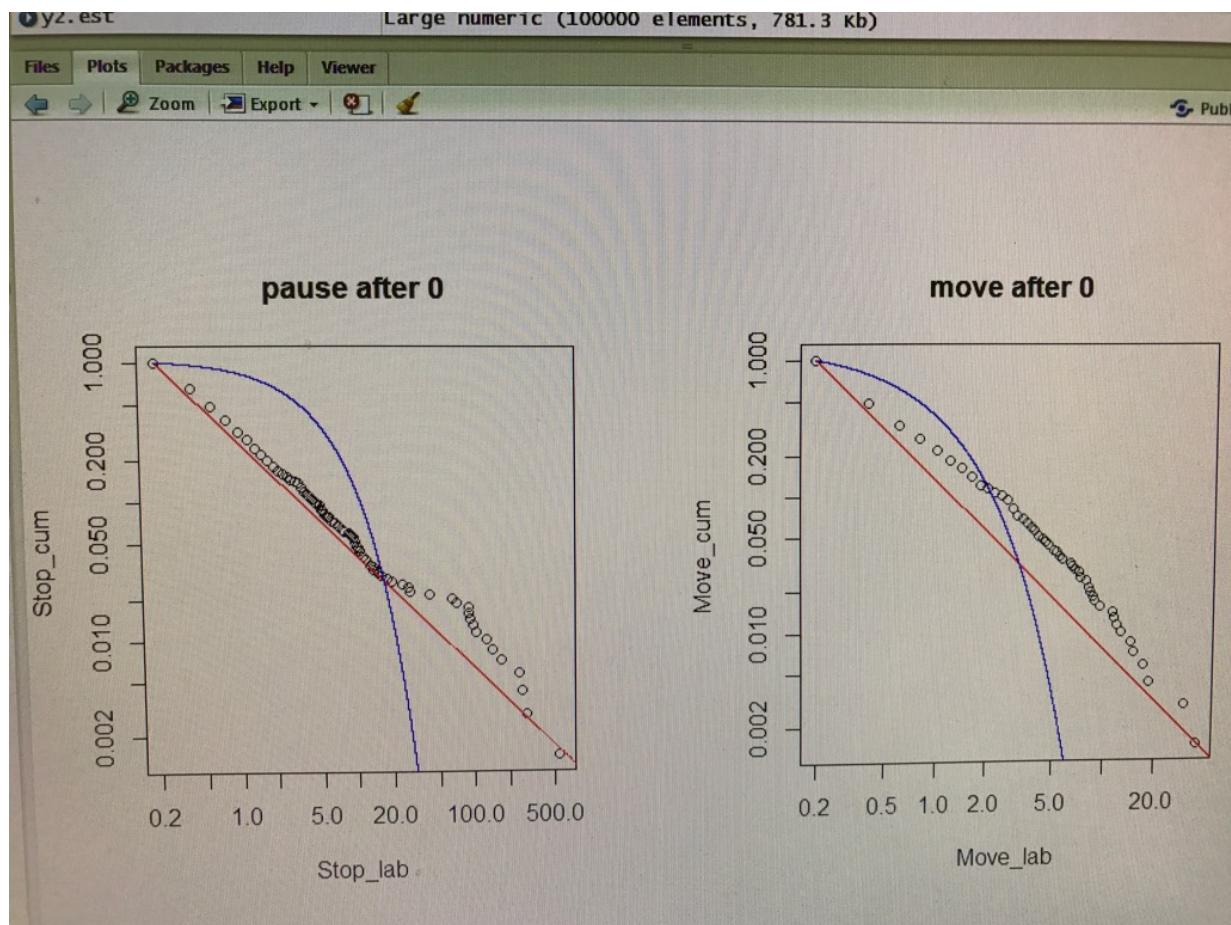

$$\lambda \approx 1.06576$$

⇒ まさに自然の結果。

⇒ 重力による時間も同様に fitting し、  
 movement pattern のモデル化。

$\gamma_1$  for  $\tau = 27243$  (Rs)

## ① experimental data

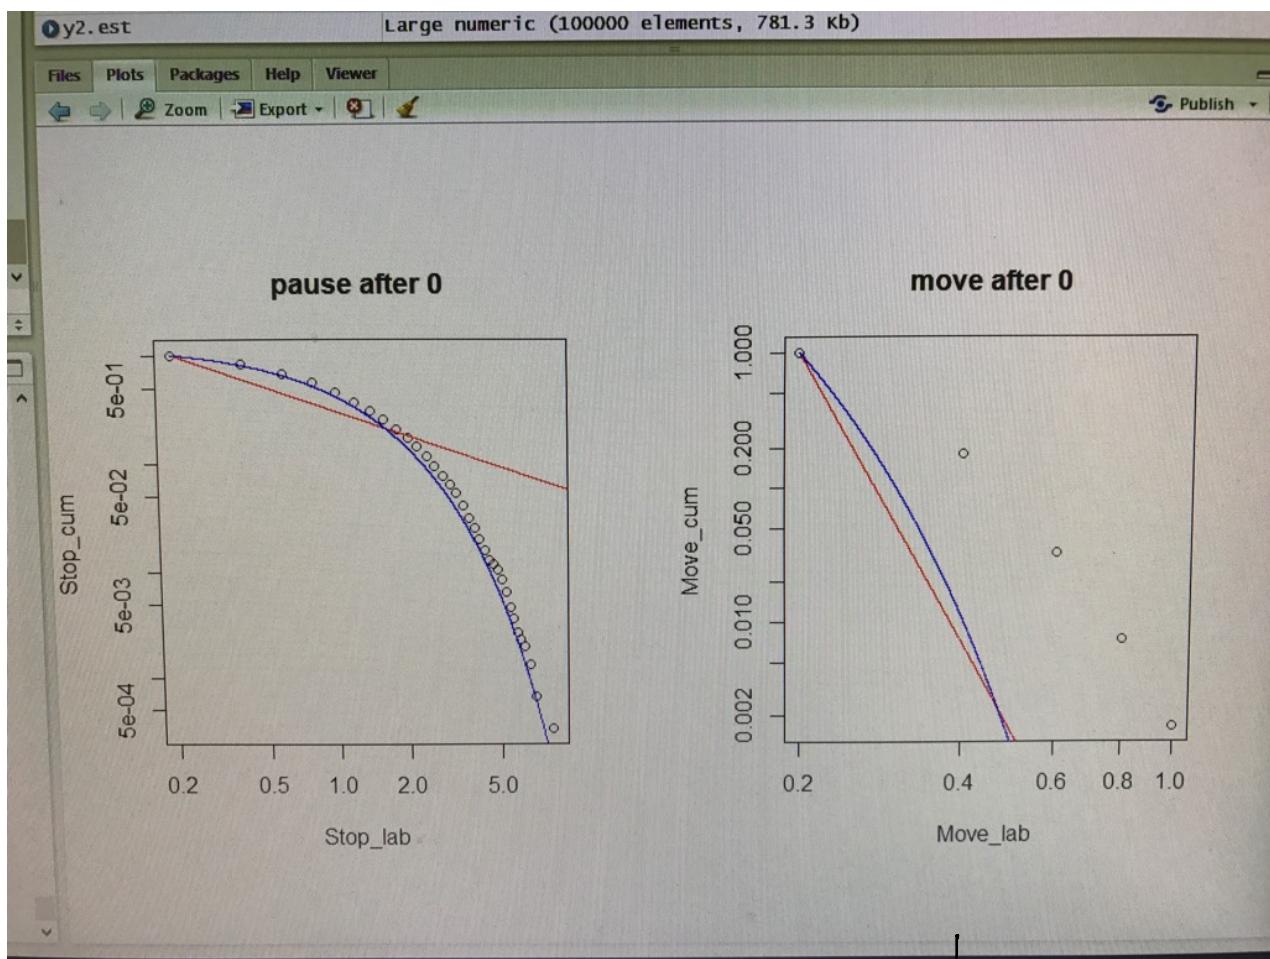

$$\mu = 1.816256$$

$$\mu = 2.258725$$

useless PL for  $f_2, f_3$

② Surrogate data (replace = T, [c. 000,000 data])

$$\exp -r = 1.095$$

データは正規分布。

beta 分布とかで。

分布は正規分布。

data が 0, 1, 2, 3,

0.2, 0.4, 0.6, 0.8, 1.0

0.821 0.146 0.026 0.006 0.0016

$\Rightarrow$  このの 収集率,

encounter rate in simulation.

~~CH もん、まくは MSD の 7 倍~~

① ~~experimental data~~

9/  
24.

(30,000 rep) で 7 倍

結果が空氣
